

BARRAN DODGER ARCHIVE — FULL-CAPACITY FORENSIC REPORT SERIES

DOCUMENT STATUS: PUBLIC ARCHIVE ANALYTICAL REPORT

METHOD: FULL DETAIL / NO COMPRESSION / PRESERVE ITEMISATION

EVIDENCE PRINCIPLE: DOCUMENT THE RECORD; DISTINGUISH RECORD FROM TESTIMONY, ALLEGATION, INFERENCE, INTERPRETATION AND UNRESOLVED MATTERS.

IMPORTANT LIMITATION

This report is a structured analytical reconstruction of material exposed through the public Barran Dodger archive and the public repository structure. It does not convert archive assertions into judicial findings. Where a proposition is not independently established, it is labelled accordingly. Counts appearing on different archive pages may represent different inventories, dates, repositories or verification stages and are not silently reconciled.

STANDARD EVIDENCE CLASSIFICATION

A — DOCUMENTED FACT: Supported directly by a reliable primary record or authoritative determination.

B — CORROBORATED CLAIM: Supported by more than one independent or materially corroborating source without necessarily constituting an official finding.

C — DOCUMENTED ALLEGATION: Recorded in a complaint, statement, correspondence or other document but not independently established.

D — INFERENCE: A conclusion drawn from documented circumstances rather than directly established.

E — INTERPRETATION: Analytical, legal, philosophical or theological interpretation.

F — UNRESOLVED: Evidence is incomplete, conflicting, unavailable or insufficient for a stronger classification.

CORE EVIDENCE COMMAND

CLAIM → IDENTIFY → SOURCE → DATE → ACTOR / INSTITUTION → PRIMARY RECORD → CORROBORATION → CONTRADICTORY / LIMITING EVIDENCE → OFFICIAL RESPONSE → FINDING STATUS → LEGAL / ANALYTICAL FRAMEWORK → CONSEQUENCE → VERIFICATION → PRESERVATION.

PROVENANCE COMMAND

SOURCE → ORIGINAL FILE → ORIGINAL FILENAME → REPOSITORY → PATH → ACQUISITION DATE → PUBLICATION DATE → HASH → GIT COMMIT → GIT BLOB → TIMESTAMP / SEAL → VERSION HISTORY → RELATED RECORDS → PUBLIC LINK.

REPORT 1 — MASTER EVIDENCE RECORD

PRIMARY FUNCTION

To operate as the central evidentiary register for the archive: what exists, where it exists, what it says, who created it, when it was created, how it is preserved, what

evidentiary status it has, what corroborates it, what contradicts it, and what remains unresolved.

PURPOSE

The Master Evidence Record is not simply a list of files. It is the control layer connecting a proposition to its primary record. The register should allow an independent reviewer to start with a claim, locate the exact document, inspect provenance, compare related records, and determine whether the proposition is established, corroborated, alleged, inferred, interpreted or unresolved.

CORE QUESTIONS

1. What evidence exists?
2. Is the source primary, secondary, analytical or testimonial?
3. What date does the record establish?
4. Who created it and who received it?
5. What institution is involved?
6. Is there a competent finding?
7. Is there corroboration?
8. Is there contradiction?
9. Can the file be independently retrieved?
10. Has its integrity been preserved?

RECOMMENDED RECORD FIELDS

1. Evidence ID — e.g. BD-MER-0001
2. Title exactly as preserved
3. Original filename
4. Repository
5. Repository path
6. File type
7. Document date
8. Acquisition date
9. Publication date
10. Author / creator
11. Recipient
12. Institution
13. Event / issue
14. Evidence classification A–F
15. Source URL
16. Archive URL
17. SHA-256
18. Git commit
19. Git blob SHA
20. OpenTimestamps record where available
21. Blockchain record where available
22. Related Evidence IDs

23. Related Report IDs
24. Verification status
25. Privacy classification
26. Notes on authenticity
27. Contradictory or limiting evidence
28. Current finding status

SOURCE HIERARCHY

The preferred hierarchy is: authoritative judicial or statutory determination; official government record; contemporaneous primary record; independent corroborating material; author account; documented allegation; inference; interpretation; speculation. A source lower in the hierarchy is not automatically false. It simply requires more care before a stronger conclusion is drawn.

PRESERVATION RULES

1. Preserve the original file.
2. Preserve the original filename where technically possible.
3. Preserve repository path and commit history.
4. Record duplicate files rather than treating duplicates as independent corroboration.
5. Never silently overwrite a superseded version.
6. Record hashes for important files.
7. Separate processed copies from originals.
8. Preserve source context and acquisition date.
9. Record redaction or privacy transformations.
10. Preserve links to mirrors without confusing mirrors with independent sources.

CRYPTOGRAPHIC VERIFICATION

SHA-256 can demonstrate that a retrieved file matches a later copy. Git commit and blob history can assist with repository provenance. OpenTimestamps or blockchain records can assist with establishing that a particular hash existed by a particular time. None of these mechanisms establishes the truth of the substantive statements in the file.

MASTER EVIDENCE CATEGORIES

- A. Judicial / tribunal / authoritative determinations
- B. Government and regulator records
- C. Contemporaneous correspondence and submissions
- D. Medical / administrative records
- E. Financial and corporate records
- F. Personal testimony and statements
- G. Forensic or AI-assisted analyses
- H. Video, audio and archived webpages
- I. Cryptographic and repository metadata
- J. Legal and human-rights analytical material

K. Spiritual or theological interpretation

CONTRADICTION REGISTER

Every material contradiction should have its own ID and include: proposition A; source A; date A; proposition B; source B; date B; whether the sources address exactly the same question; possible explanations; independent evidence; official response; current status.

INSTITUTIONAL KNOWLEDGE REGISTER

For each institution record: date contacted; recipient; method; document supplied; acknowledgement; response; action; referral; reason; follow-up; evidence that the institution actually received the information; unresolved issue. Silence should not automatically be coded as admission, knowledge or liability.

FINANCIAL REGISTER

Every amount should be labelled as actual documented loss, calculated loss, estimate, projection, opportunity cost, alleged loss or unresolved amount. The register must identify source, calculation, assumption, causation evidence, double-counting risk, mitigation and recovery.

PRIVACY REGISTER

PUBLIC; PUBLIC WITH REDACTIONS; RESTRICTED; SENSITIVE; DO NOT PUBLISH.

AI ANALYTICAL NOTE

AI analysis can assist with indexing, comparison, chronology and pattern detection. It should not be represented as a court finding, criminal investigation, medical diagnosis, government determination or independent finding of liability.

FINAL CONTROL TEST

A complete Master Evidence Record should allow a future investigator to select any major statement in the public archive and travel backwards through the chain: statement → report → evidence ID → original file → repository → provenance → corroboration → contradiction → official response → finding status. If that chain cannot be completed, the limitation should be visible.

DOCUMENTARY WARNING

The existence of a document establishes that the document exists. It does not automatically establish the truth of every statement inside it. A complaint establishes that a complaint was made; it does not itself establish the complained-of conduct. A court filing establishes that a filing occurred; it does not establish that the court accepted every proposition. A government record establishes what the government recorded or communicated; it does not necessarily establish that every interpretation of that record is correct. A blockchain timestamp can assist with integrity and chronology; it does not establish the substantive truth of a document.

READER TEST

For every significant proposition ask: Who says this? When did they say it? What did they rely upon? Is the original record available? Was it contemporaneous? Is there independent corroboration? Is there contradictory evidence? Did a competent authority make a finding? What remains unresolved?

COUNT RECONCILIATION RULE

The public archive has displayed different document, PDF, analysis, blockchain and download counts at different points. The current public forensic page, for example, exposes a particular inventory statement, while other public archive and repository pages use different figures. These should be preserved as dated project-reported inventory claims until a machine-readable reconciliation establishes which files are unique, duplicated, mirrored, superseded or separately counted.

EVIDENCE AUDIT CHECKLIST

1. Every major proposition has a unique Evidence ID.
2. The original document or authoritative source is identified.
3. The public-facing source link is named and retained.
4. The document date is distinguished from upload/publication date.
5. The institution and individual role are recorded precisely.
6. The evidence classification does not exceed what the source supports.
7. Allegations are not silently converted into findings.
8. Later interpretations are not substituted for contemporaneous records.
9. Independent corroboration is identified separately from repository duplicates.
10. Contradictory or limiting evidence is disclosed.
11. Financial figures are reproducible from source records.
12. Causation is distinguished from temporal sequence.
13. Institutional knowledge is supported by receipt/acknowledgement evidence.
14. Legal frameworks are identified without asserting a legal conclusion beyond the source.
15. Privacy status is recorded before publication.
16. Repository provenance and version history are preserved.
17. The reader can return to the primary document without relying on AI summary.
18. Unresolved questions remain visible rather than being rhetorically closed.

READER INDEPENDENCE STATEMENT

The purpose of this report is to increase the inspectability of the record. A reader should be able to disagree with the archive's interpretation while still having direct access to the underlying material. The report therefore separates documentary existence, substantive content, corroboration, official findings and interpretation. The final determination of contested facts belongs to the appropriate evidence-review, regulatory, judicial or other competent process.

END OF REPORT — FULL-CAPACITY VERSION
