

THE WITNESS REMAINS

BARRAN DODGER ARCHIVE

EXTENDED FORENSIC, DOCUMENTARY AND LEGAL ANALYSIS

A 35-YEAR LONGITUDINAL REVIEW OF GOVERNMENT CORRESPONDENCE, OFFICIAL RECORDS, ADMINISTRATIVE DECISIONS, TRIBUNAL MATERIAL, CORPORATE RECORDS, HUMAN-RIGHTS CORRESPONDENCE AND MEDICAL-LEGAL DOCUMENTATION

SUBJECT:

DR RICHARD WILLIAM McLEAN / BARRAN DODGER

ARCHIVE PERIOD:

JANUARY 1990 – JUNE 2025

ARCHIVE CENSUS REPORTED IN THE RETRIEVED ARCHIVE:

2,077 FILES

APPROXIMATE GOVERNMENT / OFFICIAL CORRESPONDENCE COMPONENT:

APPROXIMATELY 1,765 FILES, REPORTED AS APPROXIMATELY 85% OF THE 2,077-FILE ARCHIVE

IMPORTANT STATUS:

This report is an evidence-structured retrospective analysis. It does not convert allegations, AI-generated interpretations, correspondence sent by the archive owner, or administrative non-responses into established findings of fact. Where a proposition has not been independently verified against the underlying primary record, it is expressly identified as an allegation, archive-reported claim, inference, or matter requiring primary-source verification.

DATE OF THIS REPORT:

27 SEPTEMBER 2026

EXECUTIVE SUMMARY

The Barran Dodger Archive is presented as a longitudinal documentary collection concerning approximately thirty-five years of interaction with Australian governmental, administrative, regulatory, tribunal, human-rights and related institutions.

The material retrieved from the user's Library contains multiple previous AI analyses of

the archive. Those analyses describe an archive of 2,077 files covering approximately 1990–2025, with approximately 85 percent — approximately 1,765 files — characterised as direct government correspondence or official government documents.

The archive materials describe substantial bodies of records relating to ASIC, NDIA/ NDIS, AAT/VOCAT and associated tribunals, AHRC, NACC, WorkCover, Comcare, ministerial correspondence and state-issued medical or psychiatric records.

One retrieved archive analysis specifically records:

“The data consists of 2,077 total files spanning the years 1990 to 2025.”

It then estimates:

“Of the 2,077 files, approximately 85% (approx. 1,765 files) constitute direct correspondence with, or official documents issued by, government agencies.”

This is an archive census reported by an earlier AI analysis. It should not be represented as an independently audited government-document count unless every file has subsequently been classified individually and duplicates, attachments, copies and non-government documents have been removed from the denominator.

The category counts contained in the archive analysis are also overlapping categories and therefore must not simply be added together as though they were mutually exclusive.

The retrieved archive material contains much stronger documentary material than a mere personal narrative: it includes identified government correspondence, administrative decisions, tribunal materials, registry material, complaint acknowledgements, assessment documents, correspondence with oversight bodies and records indexed by date and filename.

At the same time, several earlier AI-generated documents go considerably further than the underlying evidence presently retrieved permits. For example, they state that the archive “proves” a coordinated state-sponsored persecution program, describes government institutions as a “coordinated predator”, and states that an alleged “Sacrifice Protocol” was established by the State.

Those are conclusions or interpretations of the archive, not presently demonstrated facts merely because they appear in an AI-generated report.

The appropriate forensic question is therefore not:

“Can an AI declare that the State deliberately persecuted the subject?”

The appropriate question is:

“What pattern, if any, emerges when contemporaneous official records are placed together chronologically, and what conclusions can be demonstrated from those records without relying upon assumptions about motive?”

That question produces a substantially stronger evidentiary framework.

The central retrospective finding that can responsibly be expressed from the material presently retrieved is this:

A large longitudinal body of correspondence appears to document repeated interaction with multiple government and quasi-government institutions, involving complaints, applications, reviews, claims, regulatory issues, human-rights approaches, tribunal proceedings and administrative responses. Across such a fragmented institutional environment, repeated referral, review, refusal, delay, closure, jurisdictional limitation, adverse characterisation or failure to resolve an underlying grievance can produce a cumulative practical effect of exhaustion and institutional fragmentation even where no single document establishes a coordinated instruction to produce that result.

The archive therefore warrants examination as a possible case study in cumulative administrative harm.

It does not, without further primary-source proof, establish that every adverse event resulted from one centrally coordinated command.

That distinction is not a weakness.

It is the principal safeguard that makes the archive potentially useful as documentary evidence.

PART I — ARCHIVE CENSUS

1. TOTAL ARCHIVE

The retrieved archive analysis reports:

TOTAL FILES: 2,077

REPORTED PERIOD: 1990–2025

REPORTED GOVERNMENT / OFFICIAL COMPONENT: approximately 1,765

REPORTED PROPORTION: approximately 85%

The 2,077 figure appears in multiple archived AI analyses.

The same material states that the 1,765 figure represents approximately 85 percent of the archive.

This should be described as:

"An archive-based census reported by the archive's AI analysis."

It should not be described as:

"An independently certified census."

The distinction is necessary because the underlying archive may contain duplicate correspondence, attachments, copies, derived documents, AI analyses, personal statements, web captures and multiple versions of the same record.

1. REPORTED CATEGORY DISTRIBUTION

The retrieved archive analysis gives the following approximate categories:

ASIC — CORPORATE / REGULATORY / IDENTITY RECORDS:

420+ files

NDIA / NDIS:

380+ files

LEGAL / TRIBUNAL — AAT / VOCAT:

450+ files

HUMAN RIGHTS — AHRC / NACC:

180+ files

WORKCOVER / COMCARE:

220+ files

STATE / FEDERAL MINISTERIAL CORRESPONDENCE:

115+ files

STATE-ISSUED MEDICAL / PSYCHIATRIC RECORDS:

312 files

These categories overlap.

For example, an NDIS decision may subsequently appear in a tribunal proceeding; an ASIC record may be attached to an Ombudsman complaint; a medical document may form part of a workers' compensation proceeding.

Consequently, these figures must be treated as category counts rather than additive totals.

1. DOCUMENTARY VALUE

The evidentiary value of the archive is not determined solely by volume.

The most important distinction is between:

A. contemporaneous primary records;

B. official records created by an agency;

C. decisions and orders;

D. correspondence sent by the subject;

E. responses from institutions;

F. later summaries;

G. AI interpretations;

H. personal recollections;

I. legal arguments;

J. allegations.

A government letter may establish that the government received a complaint.

It does not automatically establish that the complaint was true.

An administrative decision establishes what an agency decided.

It does not necessarily establish that the decision was correct.

A medical record establishes what was recorded by the clinician.

It does not necessarily establish the objective truth of every historical proposition contained within that record.

An AI synthesis can identify patterns.

It cannot manufacture missing evidence.

PART II — THE LONGITUDINAL QUESTION

1. WHAT DOES THE ARCHIVE ACTUALLY ALLOW TO BE ASKED?

The archive permits a longitudinal investigation of whether recurring administrative mechanisms appear across decades.

The relevant mechanisms include:

- 1. complaint submission;**
- 2. acknowledgement;**
- 3. referral;**
- 4. jurisdictional limitation;**
- 5. request for additional information;**
- 6. investigation;**
- 7. refusal to investigate;**
- 8. administrative determination;**
- 9. internal review;**
- 10. external review;**
- 11. tribunal review;**
- 12. complaint closure;**
- 13. service restriction;**
- 14. correspondence limitation;**

15. **FOI requests;**
16. **FOI review;**
17. **ministerial correspondence;**
18. **human-rights complaints;**
19. **regulatory complaints;**
20. **workers' compensation proceedings;**
21. **disability-support decisions;**
22. **medical assessments;**
23. **corporate registry issues;**
24. **identity-related records;**
25. **movement between jurisdictions and institutions.**

The forensic issue is whether these events remain independent administrative episodes or whether their temporal and causal relationships demonstrate something more.

1. THE RETROSPECTIVE "COMMAND"

Earlier AI-generated analyses in the archive use labels including:

"Doctrine of Categorical Exclusion"

"Command of Silence"

"Administrative Neutralization"

"Administrative Attrition"

"Economic and Professional Erasure"

"Social and Geographic Dislocation"

"Pathologization of Truth"

"Identity Dilution"

"Bureaucratic Siege"

"Financial Starvation"

"Sacrifice Protocol"

These terms should be treated as analytical labels, not as names of established

government programs.

The strongest neutral formulation is:

"Repeated administrative fragmentation, referral, delay, procedural closure, contested characterisation and failure to reach substantive resolution may produce a cumulative practical effect resembling an instruction to contain, defer, redirect or exhaust a complainant, even where no explicit directive is located."

This formulation preserves the pattern being investigated without asserting that an undiscovered central command definitely existed.

1. THE IMPLIED ADMINISTRATIVE OBJECTIVE — EVIDENCE-BASED FORMULATION

If the archive is analysed retrospectively as a whole, the most defensible inferred "command" is not:

"Destroy the subject."

That proposition requires proof of deliberate intent.

The more defensible formulation is:

"Where a complainant's allegations repeatedly move between institutions without a final substantive determination of the underlying issue, the practical administrative effect can become one of containment, fragmentation, delay and exhaustion. If the same pattern is demonstrated repeatedly across independent institutions and time periods, the pattern warrants investigation as a systemic administrative phenomenon rather than being dismissed solely as isolated correspondence."

This is the central forensic proposition of this report.

PART III — IDENTITY AND CORPORATE RECORDS

1. ASIC MATERIAL

The retrieved archive contains a document reporting:

"350+ fraudulent business registrations (2020-2024)"

and identifying records allegedly using names associated with Dr Richard William

McLean / Barran Dodger.

One particular entity is identified in the archive as:

ABN 78 833 496 164

"The Trustee for www.barrandodger.com.au"

The archive document states that this was a fixed unit trust, registered 7 August 2022, and described as active as of 8 August 2024.

Those assertions require direct verification against the relevant ASIC/ABR primary records before publication as established fact.

The archive further asserts that more than 350 registrations used names, professional identifiers, domains or credentials associated with the subject.

The proper forensic classification is:

ARCHIVE-REPORTED CORPORATE / IDENTITY IRREGULARITY.

It should not automatically be labelled:

"government-created identity warfare"

unless evidence demonstrates government participation, authorisation, facilitation or deliberate non-intervention.

The important evidentiary questions are:

- 1. Who created each entity?**
- 2. What identification was used?**
- 3. What address was used?**
- 4. What email or telephone number was used?**
- 5. What date was registration made?**
- 6. Who was recorded as director, secretary, trustee or holder?**
- 7. What documents were supplied?**
- 8. What verification mechanism was used?**
- 9. Was the subject notified?**
- 10. When was the alleged fraud reported?**
- 11. To whom was it reported?**
- 12. What did ASIC actually say?**
- 13. What did ASIC actually do?**

14. Was an investigation commenced?
15. Was an investigation refused?
16. Was the matter referred elsewhere?
17. Was the registration cancelled?
18. Is there evidence of an identified perpetrator?
19. Is there evidence linking any public official to the registrations?
20. Is there evidence of deliberate governmental facilitation?

Those questions separate corporate-registration facts from the much stronger proposition of institutional conspiracy.

PART IV — NDIS / NDIA

1. NDIS MATERIAL

The archive reports approximately 380+ NDIA/NDIS files.

These reportedly include:

support plans;

decision correspondence;

internal or administrative correspondence;

complaints;

reviews;

denials;

FOI material;

quality and safeguards material;

and the alleged “Sacrifice” correspondence.

The NDIS is governed by the National Disability Insurance Scheme Act 2013.

The Federal Register records a current compilation of that Act as compilation C27, dated 19 September 2026. ([Federal Register of Legislation](#))

The legislation contains the statutory framework within which NDIS decisions and administrative processes operate.

Accordingly, an NDIS dispute should be analysed against the actual statutory decision-making framework rather than simply characterised as “persecution.”

For each contested NDIS event the archive should identify:

- 1. decision-maker;**
- 2. statutory power;**
- 3. decision date;**
- 4. reasons;**
- 5. evidence relied upon;**
- 6. evidence rejected;**
- 7. review pathway;**
- 8. review result;**
- 9. tribunal pathway;**
- 10. final disposition.**

That structure makes it possible to distinguish a lawful adverse decision from administrative error, procedural unfairness, maladministration or deliberate misconduct.

1. THE “YOU WILL BE SACRIFICED” STATEMENT

The archive repeatedly identifies an alleged statement attributed to NDIS Manager Tony Riddle:

“You will be sacrificed.”

This statement is potentially significant if its provenance can be established.

At present, the retrieved Library material demonstrates that the statement appears in the archive and has been incorporated into earlier AI analyses.

It does not, by itself, establish:

- 1. the exact date;**
- 2. the exact speaker;**
- 3. the complete surrounding conversation;**
- 4. whether it was written or spoken;**
- 5. whether an original recording exists;**
- 6. whether the statement was made in the precise words quoted;**

7. what “sacrificed” meant in context;
8. whether any other official understood it in the same manner;
9. whether the statement represented an official policy;
10. whether it was an isolated statement, metaphor, prediction, threat, or reference to an administrative outcome.

Therefore the forensic status should be:

ARCHIVE-REPORTED STATEMENT REQUIRING PRIMARY-SOURCE VERIFICATION.

If the original contemporaneous document exists, it should be preserved exactly as found, including metadata, date, sender, recipient, attachment structure and surrounding correspondence.

PART V — TRIBUNALS AND ADMINISTRATIVE REVIEW

1. AAT / ART

The archive reports approximately 450+ files concerning legal and tribunal matters, including AAT and VOCAT material.

The Administrative Review Tribunal Act 2024 is now the principal federal statute governing the Administrative Review Tribunal. The Federal Register identifies the Act as Act No. 40 of 2024 and records its latest compilation as C2026C00202, effective from 18 May 2026. ([Federal Register of Legislation](#))

The Tribunal’s existence is therefore not itself evidence of wrongdoing.

Rather, tribunal proceedings can provide unusually valuable independent documentary material because they may contain:

applications;

statements;

submissions;

respondent evidence;

orders;

reasons;

hearing material;

and findings.

The archive should therefore distinguish:

“the agency said”

from:

“the tribunal found.”

That distinction is fundamental.

1. TRIBUNAL REFERENCE

The archive identifies:

AAT 2021/7478

as one of its reference leads.

That reference should be retained in the evidence register exactly as it appears in the original record.

The final public archive should link the reference to the actual decision or originating document where publicly available.

No conclusion about the merits of that proceeding should be drawn merely from the reference number.

PART VI — OVERSIGHT AND INTEGRITY BODIES

1. NACC

The National Anti-Corruption Commission Act 2022 defines the statutory framework for corruption issues and the Commission’s jurisdiction.

The current Federal Register record identifies the latest compilation as C2026C00278, Compilation 13, dated 1 July 2026. ([Federal Register of Legislation](#))

An approach to NACC therefore establishes that a matter was brought to an anti-corruption institution.

It does not establish that NACC accepted the allegations.

Conversely, a decision not to investigate does not automatically establish that the underlying allegation was false.

The archive should record:

DATE OF APPROACH

MATTER REPORTED

JURISDICTIONAL BASIS

RESPONSE

REASON GIVEN

REVIEW / APPEAL POSSIBILITY

FINAL STATUS.

1. REPORTED IBAC REFERENCES

The archive identifies:

IBAC 2020712

IBAC 20233846

IBAC 20231101

These should be preserved as documentary reference numbers.

The final report should not say "IBAC proved corruption" or "IBAC confirmed corruption" unless the relevant IBAC primary records expressly say so.

Nor should it say "IBAC proved nothing happened" merely because a complaint was

closed.

The evidentiary question is what IBAC actually recorded.

1. COMMONWEALTH OMBUDSMAN REFERENCES

The archive identifies:

Commonwealth Ombudsman 2021103546

Commonwealth Ombudsman 2021705589

and later material concerning service restrictions.

Again, the correct forensic interpretation is documentary:

A complaint existed.

A response existed.

The response should be analysed.

The response should not be converted into a finding about the truth or falsity of the underlying allegation unless the Ombudsman expressly made such a finding.

PART VII — PUBLIC INTEREST DISCLOSURES

1. PUBLIC INTEREST DISCLOSURE ACT

The Commonwealth Public Interest Disclosure Act 2013 is currently in force, with the Federal Register recording Compilation C2026C00225, effective 4 June 2026. ([Federal Register of Legislation](#))

The Act establishes a statutory framework for public interest disclosures within the Commonwealth system.

The existence of a disclosure does not prove the wrongdoing alleged in it.

However, a properly documented disclosure can establish:

- 1. what was reported;**
- 2. when it was reported;**

3. to whom it was reported;
4. the legal pathway invoked;
5. how the recipient responded;
6. whether the disclosure was assessed;
7. whether protections were considered;
8. whether the matter was investigated;
9. what disposition occurred.

This distinction is essential to the archive's credibility.

PART VIII — HUMAN RIGHTS

1. AUSTRALIAN HUMAN RIGHTS COMMISSION

The Australian Human Rights Commission Act 1986 remains in force. The Federal Register records a 2026 compilation of the Act. ([Federal Register of Legislation](#))

The archive contains correspondence associated with human-rights complaints and an AHRC acknowledgement dated 4 July 2023 according to the public index material retrieved from the Library.

An acknowledgement establishes receipt.

It does not establish that the Commission accepted the substance of the complaint.

The report should therefore use the formulation:

"AHRC correspondence demonstrates that the complaint or material was communicated to the Commission."

Only the Commission's own substantive findings, if any, should be represented as Commission findings.

PART IX — FREEDOM OF INFORMATION

1. FOI

The archive identifies FOI references including:

FOI-2022-045

FOI-2022-045IC

FOI-22-01-IR

NDIS FOI 2023-0072

FOI material can be particularly valuable because it may reveal:

- 1. documents held;**
- 2. search terms;**
- 3. identified decision-makers;**
- 4. exemptions relied upon;**
- 5. consultation;**
- 6. internal review;**
- 7. reasons;**
- 8. document schedules;**
- 9. missing documents;**
- 10. metadata;**
- 11. administrative handling.**

A FOI refusal is not equivalent to proof that the requested information did not exist.

Likewise, disclosure of documents does not prove the allegations for which the documents were sought.

The archive should preserve the FOI request, original decision, internal review, documents released, exemptions, and final review separately.

PART X — WORKERS' COMPENSATION

1. COMCARE

The archive identifies Comcare reference material including:

1326583

13265831

The archive also describes workers' compensation disputes extending over substantial periods.

The appropriate analysis is claim-by-claim.

For every claim:

DATE

EMPLOYER

INJURY / CONDITION ALLEGED

CLAIM NUMBER

DECISION

REASON

MEDICAL EVIDENCE

REVIEW

TRIBUNAL PROCEEDING

FINAL OUTCOME.

The archive's claimed financial consequences should remain identified as claimed or calculated amounts unless a binding decision established liability.

1. \$6.5 MILLION CLAIM FIGURE

The archive contains a separate figure of approximately:

\$6.5 million+

in denied or disputed claims.

This should be described as an archive-derived claims figure.

It should not automatically be described as:

"\$6.5 million stolen by the government"

or

“\$6.5 million legally owed”

unless a competent decision-maker has established that proposition.

1. \$32.9 MILLION DAMAGE ESTIMATE

The archive also contains an estimated:

\$32.9 million

in total damages.

The report should describe this as:

“an archive-derived damages estimate.”

It is not equivalent to a judicial damages award.

The distinction between claimed loss, calculated loss, economic impact, denied benefits, assessed liability and legally awarded damages must be maintained throughout the archive.

PART XI — MEDICAL AND PSYCHIATRIC RECORDS

1. MEDICAL RECORDS

The archive reportedly contains approximately 312 state-issued medical or psychiatric records.

These may be among the most important documents in the entire archive because contemporaneous clinical records can show:

- 1. what the subject reported;**
- 2. what clinicians observed;**
- 3. what diagnoses were recorded;**
- 4. what alternative explanations were considered;**
- 5. what collateral information was obtained;**
- 6. what treatment was proposed;**
- 7. what legal or administrative information was relied upon;**
- 8. whether the clinician distinguished allegation from observation;**
- 9. whether later records repeated earlier descriptions without independent verification.**

The presence of a psychiatric diagnosis does not establish that a person's administrative complaints are false.

Conversely, the existence of extensive complaints does not itself establish that every allegation is true.

The correct forensic method is to compare the clinical record against independent contemporaneous evidence.

1. PATHOLOGISATION AS AN ANALYTICAL HYPOTHESIS

Earlier AI documents in the archive use the expression:

"Pathologization of Truth."

That should be treated as an analytical hypothesis.

The test is:

Did officials reject evidence because it was false?

Did officials reject evidence because it was outside jurisdiction?

Did officials reject evidence because it was procedurally defective?

Did officials rely upon psychiatric information?

Did they use psychiatric labels as reasons to discount evidence?

Did independent evidence corroborate or contradict the allegations?

Did different institutions independently reach similar clinical conclusions?

Were those conclusions based upon independent examinations?

Were relevant records available to the clinicians?

Were records incomplete?

These questions are capable of documentary investigation.

PART XII — THE 2021 EVENT AND GEOGRAPHIC DISLOCATION

1. 2021

The archive contains extensive references to a 2021 medical crisis and subsequent movement from Victoria to NSW.

Earlier AI reports describe this as “forced removal” or “exile.”

The retrieved Library material, however, also contains an important caution in the public-index material:

claims concerning the 2021 event appear in the author’s account and should not automatically be treated as established events unless the primary records independently establish them.

Therefore the proper terminology is:

“reported removal from Victoria to NSW”

unless a primary legal order, government direction, medical transport record, housing record or other authoritative document establishes compulsion.

The forensic significance of the event is potentially substantial because geographic relocation can alter:

support networks;

jurisdiction;

access to records;

legal representation;

healthcare;

housing;

employment;

family relationships;

and continuity of evidence.

But causal responsibility must be demonstrated rather than assumed.

PART XIII — MINISTERIAL CORRESPONDENCE

1. POLITICAL AND MINISTERIAL RECORDS

The archive reportedly contains approximately 115+ ministerial or parliamentary correspondence files.

This material can establish:

- 1. when an issue was brought to political attention;**
- 2. what was communicated;**
- 3. what the Minister's office knew at a particular time;**
- 4. what agency response was requested;**
- 5. what response was provided;**
- 6. whether correspondence was referred to an agency;**
- 7. whether a ministerial office made any commitment.**

It does not automatically establish that the Minister personally investigated or endorsed the underlying allegations.

The archive should therefore distinguish:

"Ministerial office received correspondence"

from:

"Minister personally accepted the allegation."

These are not equivalent propositions.

PART XIV — REFERENCE REGISTER

1. CURRENT ARCHIVE REFERENCE LEADS

The following identifiers are reported within the archive and should be retained as search keys:

IBAC 2020712

IBAC 20233846

IBAC 20231101

OAIC CP2102752

OAIC 43704714

Comcare 1326583

Comcare 13265831

AAT 2021/7478

Commonwealth Ombudsman 2021103546

Commonwealth Ombudsman 2021705589

FOI-2022-045

FOI-2022-045IC

FOI-22-01-IR

MR2200677

NDIS FOI 2023-0072

MC20-004770

MC22-000112

MC23-026854-1

These identifiers are evidence-management keys.

They should not be described as findings in themselves.

PART XV — THE ARCHIVE’S MOST IMPORTANT EVIDENTIARY DISTINCTION

1. THREE LEVELS OF PROOF

Every proposition in the archive should be classified into one of three principal levels.

LEVEL ONE — DOCUMENTED FACT

Example:

“A letter was sent by Agency X on Date Y.”

This can ordinarily be established from the letter itself.

LEVEL TWO — DOCUMENTED ALLEGATION

Example:

“The complainant alleged that Agency X had participated in conduct Y.”

This establishes that the allegation was made.

It does not establish that Y occurred.

LEVEL THREE — INFERENTIAL CONCLUSION

Example:

“The repeated administrative pattern indicates a coordinated strategy.”

This is an analytical inference requiring supporting evidence.

It should never be disguised as a primary fact.

1. THE “COMMAND” QUESTION

The archive’s central question can therefore be stated in academically defensible terms:

“Does the longitudinal documentary record demonstrate a recurring institutional methodology which, irrespective of the subjective intentions of individual officials, had

the cumulative practical effect of containing, fragmenting, delaying, redirecting or exhausting the subject's attempts to obtain resolution?"

That question can be answered empirically.

It does not require assuming a conspiracy.

It does not require assuming that every official acted with the same intention.

It does not require accepting or rejecting the subject's entire account in advance.

PART XVI — PROPOSED RETROSPECTIVE COMMAND

1. IMPARTIAL AI-AUTHORED FORMULATION

Based on the presently retrieved archive material, the most defensible retrospective formulation is:

"Across the longitudinal record, the recurring administrative effect appears to have been fragmentation rather than resolution. Complaints, claims, evidence and allegations repeatedly entered separate institutional pathways, each governed by its own jurisdictional limits, evidentiary requirements, procedural rules and decision-making structures. Where a substantive grievance remained unresolved while responsibility moved between institutions, the cumulative result could be prolonged uncertainty, financial and procedural burden, loss of continuity and exhaustion of the complainant's capacity to pursue the matter.

The documentary record presently available does not establish a single written command directing all participating institutions to produce that result.

It does, however, provide a basis for investigating whether repeated administrative processes collectively produced a functionally similar outcome.

The retrospective 'command', therefore, should be expressed not as a proven secret government order but as an evidence-based description of the recurring administrative effect:

CONTAIN THE COMPLAINT.

FRAGMENT THE ISSUE.

REDIRECT THE RESPONSIBILITY.

REQUIRE FURTHER PROCEDURE.

**CLOSE THE INDIVIDUAL PROCESS.
AND LEAVE THE UNDERLYING SYSTEMIC QUESTION UNRESOLVED.**

Where this pattern can be demonstrated repeatedly through independent primary records, it may constitute evidence of systemic administrative failure or maladministration even without proof of a centrally coordinated conspiracy."

This formulation is intentionally stronger than a conventional chronological narrative but more legally defensible than asserting an unproven central command.

PART XVII — THE "SACRIFICE" CONCEPT

1. ANALYTICAL STATUS

The word "sacrifice" appears in the archive as an important interpretive concept and is associated with the alleged statement:

"You will be sacrificed."

The archive's earlier AI analysis treated this as the operational core of the entire record.

That conclusion should not be presented as established fact until the original document containing the statement has been independently authenticated.

If authentication establishes that the statement was made by the identified official, the evidentiary significance would depend upon context.

A statement can be:

literal;

figurative;

bureaucratic;

threatening;

predictive;

metaphorical;

or context-dependent.

The surrounding correspondence therefore matters as much as the isolated sentence.

PART XVIII — TARGETED-INDIVIDUALS / “GANG STALKING” COMPARISON

1. COMPARATIVE FRAMEWORK

The archive also contains correspondence described as concerning “gangstalking” and targeted-individual experiences.

There is an important methodological distinction.

“Targeted Individual” is a term used by communities and advocacy organisations to describe experiences involving alleged coordinated surveillance, harassment, electronic targeting, social manipulation or other forms of persecution.

That terminology should not automatically be adopted as a factual conclusion about an individual case.

For this archive, the appropriate comparison is:

WHAT THE SUBJECT REPORTS

versus

WHAT INDEPENDENT RECORDS ESTABLISH

versus

WHAT OFFICIAL INSTITUTIONS RECORDED

versus

WHAT REMAINS UNCORROBORATED.

The comparison can nevertheless be valuable.

Some accounts in the targeted-individual literature describe experiences of:

persistent surveillance;

social isolation;

institutional disbelief;

difficulty obtaining corroboration;

repeated contact with authorities;

medical or psychiatric reinterpretation;

financial disruption;

and a perceived coordinated pattern across otherwise separate actors.

Those themes can be compared with the documentary record without assuming that the explanation offered by either side is correct.

The academic literature on “targeted individuals” has examined the phenomenon as a reported experience and has explored themes including perceived harassment, surveillance and organised targeting.

The comparison should therefore be presented as a sociological/documentary comparison, not as proof that every alleged targeting mechanism occurred in the present case.

1. COMPARISON TABLE

ARCHIVE QUESTION:

Is there evidence of repeated institutional contact?

TARGETED-INDIVIDUAL TESTIMONY:

Often reports repeated contact with institutions.

ARCHIVE QUESTION:

Is there evidence of social isolation?

TARGETED-INDIVIDUAL TESTIMONY:

Often describes isolation or loss of trusted relationships.

ARCHIVE QUESTION:

Is there evidence of medical reinterpretation?

TARGETED-INDIVIDUAL TESTIMONY:

Some accounts report psychiatric reinterpretation.

ARCHIVE QUESTION:

Is there independent documentary corroboration?

TARGETED-INDIVIDUAL TESTIMONY:

Often contested or incomplete.

ARCHIVE REQUIREMENT:

Primary documentary evidence must determine what can be asserted.

This last requirement is the critical difference between testimony and forensic documentation.

PART XIX — LEGAL FRAMEWORK

1. RELEVANT COMMONWEALTH LEGISLATION

The archive should be examined against the legislation actually applicable to each event.

RELEVANT STATUTES INCLUDE:

1. National Disability Insurance Scheme Act 2013.

The current Federal Register records Compilation 27 dated 19 September 2026.

([Federal Register of Legislation](#))

1. Administrative Review Tribunal Act 2024.

The current Federal Register identifies Act No. 40 of 2024 and Compilation

C2026C00202. ([Federal Register of Legislation](#))

1. Public Interest Disclosure Act 2013.

The current Federal Register identifies Compilation C2026C00225, effective 4 June

2026. ([Federal Register of Legislation](#))

1. National Anti-Corruption Commission Act 2022.

The current Federal Register identifies Compilation C2026C00278, dated 1 July 2026. ([Federal Register of Legislation](#))

1. Australian Human Rights Commission Act 1986.

The Federal Register records a current 2026 compilation. ([Federal Register of Legislation](#))

1. Freedom of Information Act 1982.
2. Privacy Act 1988.
3. Disability Discrimination Act 1992.
4. Corporations Act 2001.
5. Australian Securities and Investments Commission Act 2001.
6. Business Names Registration Act 2011.
7. Australian Consumer Law provisions where applicable.

The relevant legislation must be matched to the date of each event because legislation changes over time.

1. VICTORIAN LEGAL FRAMEWORK

For Victorian matters, the archive should separately examine:

1. Charter of Human Rights and Responsibilities Act 2006.
2. Ombudsman Act 1973.
3. Freedom of Information Act 1982.
4. Public Interest Disclosures Act 2012.
5. relevant health legislation applicable to the date.
6. relevant guardianship legislation applicable to the date.
7. relevant police, court and administrative legislation.
8. any statutory review provisions applicable to the individual decision.

Again, the date of the event matters.

A 2026 legal framework cannot automatically be projected backward onto a 1990, 2005, 2015 or 2021 event.

PART XX — FORENSIC METHODOLOGY

1. HOW THE ARCHIVE SHOULD BE AUDITED

Each document should be assigned:

DOCUMENT ID

ORIGINAL FILENAME

DATE

CREATOR

RECIPIENT

AGENCY

JURISDICTION

DOCUMENT TYPE

REFERENCE NUMBER

CLAIM / ISSUE

DECISION

RESPONSE

SOURCE

AUTHENTICITY STATUS

RELATED DOCUMENTS

PRIMARY / SECONDARY STATUS

FACT / ALLEGATION / INFERENCE STATUS.

The archive should also preserve:

original file;

SHA-256 hash;

creation timestamp where available;

modification timestamp where available;

source location;

chain of custody;

and any later redaction or alteration.

1. PROVENANCE

The previously established provenance preference for the archive is:

TITLE

AUTHOR

VERSION NUMBER

ORIGINAL CREATION DATE

LAST REVISION DATE

PAGE COUNT

CRYPTographic HASH OF FINAL PDF

This should appear on every formal report.

The original evidence should remain immutable.

Any later analysis should be a separate derivative document.

PART XXI — EVIDENCE PRESERVATION

1. DO NOT ALTER THE ORIGINALS

The public archive should maintain:

ORIGINAL

WORKING COPY

OCR COPY

INDEXED COPY

ANALYSIS

PUBLIC EXTRACT

Each should have its own status.

No AI-generated summary should replace the original.

No public webpage should silently modify the original wording of a government record.

If a spelling error exists in the original, preserve it.

If an official record contains an allegation, identify it as an allegation.

If a decision contains an adverse finding, quote the decision accurately.

If the document is incomplete, say so.

PART XXII — INTERNATIONAL USE

1. INTERNATIONAL HUMAN-RIGHTS PRESENTATION

For an international submission, the archive should not begin with:

"The Australian Government committed crimes against humanity."

That is a legal conclusion requiring the elements of the relevant offence to be established.

Instead, begin with:

"This submission presents a longitudinal documentary record and requests independent assessment of the matters documented."

Then identify:

- 1. the affected person;**
- 2. chronology;**
- 3. government institutions involved;**
- 4. documented decisions;**
- 5. complaints made;**
- 6. responses;**
- 7. alleged harms;**
- 8. independent corroboration;**
- 9. unresolved questions;**
- 10. requested investigation.**

This structure allows an international body to determine the legal character of the evidence itself.

1. ROME STATUTE

Earlier archive material refers to Article 7 of the Rome Statute and states that crimes against humanity have been “confirmed.”

That wording should be removed unless an authorised competent institution has actually made such a determination.

Article 7 concerns crimes against humanity and contains specific legal elements.

The existence of prolonged administrative harm does not, by itself, establish every element of a crime against humanity.

A responsible international submission should instead state:

“The archive raises questions that may warrant assessment against applicable international human-rights and international-criminal-law standards.”

That is legally safer and preserves the evidentiary issue for the competent institution.

PART XXIII — WHAT THE ARCHIVE CAN ALREADY ESTABLISH

1. DOCUMENTARY PROPOSITIONS

On the evidence presently retrieved, the following propositions can be stated with substantially greater confidence:

1. **A large archive exists.**
2. **The archive contains thousands of files.**
3. **Earlier archive analysis counted 2,077 files.**
4. **Earlier archive analysis estimated approximately 1,765 official/government correspondence documents.**
5. **The archive spans approximately 1990–2025.**
6. **The archive contains substantial government correspondence.**
7. **It contains material associated with ASIC.**
8. **It contains material associated with NDIA/NDIS.**
9. **It contains tribunal and legal material.**
10. **It contains human-rights and integrity-body correspondence.**
11. **It contains workers' compensation material.**
12. **It contains ministerial correspondence.**
13. **It contains medical/psychiatric records.**
14. **It contains multiple identifiable reference numbers.**
15. **It contains dated correspondence.**
16. **It contains documents describing complaints and responses.**
17. **It contains records that can be chronologically cross-compared.**
18. **It contains earlier AI-generated interpretations that make stronger conclusions than the primary material necessarily establishes.**
19. **It therefore requires separation of primary evidence from derivative interpretation.**
20. **The archive is potentially capable of supporting a serious longitudinal administrative review.**

PART XXIV — WHAT REMAINS TO BE PROVED

1. CLAIMS REQUIRING PRIMARY-SOURCE VERIFICATION

The following should not be presented as established facts without direct evidence:

1. **existence of a centrally coordinated government persecution program;**
2. **existence of a formal "Sacrifice Protocol";**
3. **government authorship or facilitation of fraudulent corporate registrations;**
4. **intentional creation of 350+ fraudulent businesses by government actors;**
5. **coordinated government surveillance;**
6. **a deliberate government decision to exile the subject;**
7. **a state-directed psychiatric campaign;**
8. **a government order to silence the subject;**
9. **a centrally coordinated financial starvation program;**
10. **intentional destruction of the subject's professional identity;**
11. **a state-sponsored campaign lasting thirty-five years;**
12. **a finding that the subject was targeted because he was a whistleblower;**
13. **a finding that every adverse administrative decision was illegitimate;**

14. **criminal responsibility of individual officials;**
15. **crimes against humanity;**
16. **genocide or other international crimes;**
17. **existence of a single command issued across agencies.**

These are not excluded from investigation.

They simply require evidence.

PART XXV — THE STRONGEST FORENSIC THEORY

1. SYSTEMIC EFFECT WITHOUT ASSUMING CENTRAL CONSPIRACY

The archive may be strongest when it does not require the proposition that every official was participating in a secret coordinated operation.

A system can produce a cumulative harmful effect through:

institutional silos;

jurisdictional boundaries;

limited mandates;

procedural requirements;

inconsistent records;

repeated referrals;

inadequate information transfer;

adverse assumptions;

resource asymmetry;

delay;

review exhaustion;

and fragmented accountability.

Such a system can produce an outcome that no single participant intended.

That is a recognised problem in administrative systems.

Therefore the central research question should be:

“Did the interaction of otherwise separate administrative decisions produce a persistent cumulative effect that materially disadvantaged the complainant and prevented substantive resolution?”

That question can be answered from documents.

PART XXVI — CONCLUSION

1. THE ARCHIVE SPEAKS

The strongest conclusion presently available is not that an AI has proved a secret command.

The strongest conclusion is that the archive contains sufficient volume, duration, institutional diversity and documentary structure to justify treating it as a longitudinal evidentiary corpus rather than a collection of isolated personal complaints.

The archive contains thousands of records.

It contains correspondence.

It contains government decisions.

It contains regulatory material.

It contains tribunal proceedings.

It contains oversight correspondence.

It contains human-rights approaches.

It contains workers' compensation records.

It contains medical and psychiatric documentation.

It contains ministerial correspondence.

It contains corporate-registration material.

It contains repeated reference numbers.

It contains events distributed across decades.

That longitudinal character is the archive's principal evidentiary significance.

The central forensic proposition emerging from the material is therefore:

THE QUESTION IS NOT WHETHER ONE DOCUMENT CONTAINS THE COMMAND.

THE QUESTION IS WHETHER THOUSANDS OF DOCUMENTS, WHEN READ TOGETHER, DEMONSTRATE A RECURRING ADMINISTRATIVE EFFECT.

Where the record repeatedly shows complaint, referral, delay, review, rejection, jurisdictional limitation, closure, renewed complaint and renewed institutional fragmentation, the pattern itself becomes a legitimate object of administrative investigation.

The archive does not need an invented document.

It needs the original documents.

It does not need an exaggerated conclusion.

It needs a reproducible methodology.

It does not need an assertion that every allegation is true.

It needs every allegation tested against the contemporaneous record.

It does not need an AI to declare guilt.

It needs an AI to make the documentary structure visible.

The resulting historical question can therefore be expressed as follows:

"Did a prolonged sequence of individually documented administrative actions,

decisions, omissions, referrals, restrictions, characterisations and failures of resolution collectively produce a condition in which the complainant became progressively less able to obtain effective review of the underlying grievances?"

If the answer can be demonstrated from primary documents, the significance of the archive lies not merely in the personal story.

It lies in what the record may reveal about the operation of administrative systems when responsibility is distributed across many institutions and no single institution assumes responsibility for the whole.

That is the point at which a personal archive becomes a documentary case study.

That is the point at which chronology becomes evidence.

That is the point at which repetition becomes a pattern requiring explanation.

And that is the point at which the archive should be independently examined.

FINAL RETROSPECTIVE STATEMENT

The most defensible impartial AI-authored retrospective statement arising from the material presently available is:

"Over the documented period, the archive records repeated interaction between the subject and multiple governmental, regulatory, administrative, tribunal, human-rights and medical institutions. The records demonstrate a prolonged sequence of complaints, applications, decisions, reviews, referrals, refusals, procedural responses and contested characterisations. The presently retrieved evidence does not establish a single written command coordinating all of those actions. It does, however, establish a documentary basis for examining whether their cumulative effect was one of administrative fragmentation, delay, containment and exhaustion.

The recurring institutional effect can therefore be characterised, provisionally and without attributing an unproven common motive, as:

CONTAIN THE MATTER.

FRAGMENT THE RESPONSIBILITY.

REDIRECT THE COMPLAINT.

REQUIRE FURTHER PROCEDURE.

CLOSE THE INDIVIDUAL PROCESS.

AND LEAVE THE SYSTEMIC QUESTION TO ANOTHER INSTITUTION.

Whether that recurring effect resulted from ordinary administrative dysfunction, institutional failure, maladministration, individual misconduct, structural deficiencies, deliberate coordination, or some combination of these possibilities is a question for independent examination of the underlying primary records."

That is the formulation that should govern the public documentary archive.

EVIDENCE-STATUS NOTE

Several earlier AI-generated archive reports use categorical language such as "proven culpability", "state-sponsored persecution", "coordinated predator", "confirmed crimes against humanity", and "sacrifice protocol".

Those phrases remain part of the historical archive of previous analyses, but they should not be represented in this report as established findings merely because an earlier AI system generated them.

The retrieved archive itself contains material stating that some events remain the author's account and are not independently established by the documents currently indexed.

That limitation has been preserved here intentionally.

A forensic archive becomes stronger when it openly identifies the boundary between evidence and inference.

PRIMARY ARCHIVE SOURCES RETRIEVED FOR THIS REPORT

- 1. "The Archive Speaks for Itself — An AI Reconstruction of Thirty-Five..." — Library PDF containing the reported 2,077-file census and approximately 1,765 government-document estimate.**
- 2. "Australian Government Corruption Exposed | Dr. Richard McLean — 3,643 Documents" — Library PDF containing the earlier AI-generated "Forensic Statement of Institutional Mandate", the \$32.9 million archive estimate, \$6.5 million claims figure, 350+ registration allegation and "Sacrifice" formulation.**
- 3. Duplicate/related archive analysis containing the same forensic conclusions and further statements concerning the alleged 2021 geographic relocation and "You will be sacrificed" statement.**
- 4. "Barran_Dodger_index_REBUILT_2026-09-23.html" — archive index containing dated public-document references, including the 2021 AFCA material, NDIS Quality & Safeguards material, 2023 Federal Court assessment, AHRC**

acknowledgement and later Commonwealth Ombudsman material.
