

THE WITNESS REMAINS
BARRAN DODGER ARCHIVE
MASTER FORENSIC, DOCUMENTARY AND COMPARATIVE EVIDENCE REPORT
35-YEAR DOCUMENTARY RECORD
JANUARY 1990 – JUNE 2025
PUBLIC ARCHIVE / EVIDENCE PRESERVATION EDITION

AUTHOR:

Barran Dodger

ARCHIVE:

Barran Dodger Archive

PUBLIC REPOSITORY:

<https://github.com/wezzo72/Barrandodger>

PUBLIC ARCHIVE SITE:

<https://barrandodger.com/>

WEZZO72 PUBLIC MIRROR:

<https://wezzo72.github.io/Barrandodger/>

DOCUMENT STATUS:

Public forensic and documentary research report.

PURPOSE:

To provide a comprehensive, independently reviewable framework through which the documentary record preserved by the Barran Dodger Archive may be examined, challenged, corroborated, contextualised and, where appropriate, referred to competent investigative, judicial, administrative, human-rights, academic or journalistic bodies.

IMPORTANT STATUS STATEMENT:

This report does not purport to constitute a judgment of a court, tribunal, royal commission, statutory inquiry or international court.

It does not transform an allegation into an established fact.

It does not assert that every interpretation contained within the archive has been independently proved.

It does not assert that similarities between the archive and the literature concerning “Targeted Individuals” or “gang-stalking” establish a common perpetrator, common program or government conspiracy.

Instead, this report preserves the distinction between:

1. documentary fact;
2. independently corroborated information;
3. documented allegation or witness testimony;
4. analytical inference;
5. interpretation;
6. unresolved evidentiary questions.

That distinction is fundamental to the integrity of the archive.

=====

===

PART I — EXECUTIVE FORENSIC STATEMENT

1. THE SUBJECT OF THIS REPORT

The Barran Dodger Archive is presented as a long-term documentary corpus concerning the author's interactions with government agencies, administrative bodies, tribunals, regulators, health and disability systems, complaint mechanisms, legal institutions and other organisations over an extended period.

The public GitHub repository describes itself as a public research front for the existing documentary corpus and expressly states that the new website presentation does not replace or rewrite the original evidence stores.

The repository further states:

"ORIGINAL EVIDENCE MUST REMAIN PRESERVED. Website presentation may change. Underlying records must not be altered."

That preservation principle is independently observable in the public repository structure.

The repository currently contains dedicated directories including:

- ai-essays;
- archive-parts;
- assets;
- data;
- docs;
- emails;
- evidence;
- fragments;
- papers;
- scripts;
- sources;
- spec;
- tabs.

It also contains numerous documentary reports and PDFs, including the ten-part report series used as the foundation for this consolidated document. ([GitHub](#))

2. THE CENTRAL RESEARCH QUESTION

The central question of the archive is not merely whether individual adverse events occurred. The larger question is whether a sufficiently long and sufficiently interconnected documentary record can reveal a recurring administrative pattern that would not necessarily be visible from any individual letter, complaint, determination or proceeding viewed in isolation.

The archive therefore asks the reviewer to examine:

- chronology;
- repetition;
- institutional interaction;
- administrative decision-making;
- correspondence;

- procedural responses;
- referrals;
- complaint handling;
- documentary contradictions;
- jurisdictional changes;
- financial consequences;
- identity and corporate-record issues;
- disability-system interactions;
- legal and tribunal processes;
- human-rights complaints;
- whistleblower material;
- official responses;
- unanswered correspondence;
- and the relationship between contemporaneous records and later retrospective interpretation.

3. THE ARCHIVE'S CENTRAL PROPOSITION

The archive's central proposition may be stated neutrally as follows:

The author contends that a prolonged series of interactions with public institutions produced a cumulative pattern of exclusion, procedural obstruction, loss of effective remedy, financial and professional detriment, jurisdictional dislocation and disputed characterisation of the author's credibility and conduct.

The documentary task is to determine which components of that proposition are directly established by records, which are corroborated by independent sources, which remain allegations, and which are interpretations of the cumulative pattern.

4. WHY THE CUMULATIVE RECORD MATTERS

Administrative events are commonly assessed one proceeding at a time.

A complaint is assessed as a complaint.

An FOI application is assessed as an FOI application.

A tribunal proceeding is assessed as a tribunal proceeding.

A disability-support decision is assessed as a disability-support decision.

A regulatory record is assessed as a regulatory record.

The archive's forensic proposition is that this fragmentation may conceal cumulative effects. Accordingly, the archive attempts to reconnect:

EVENT → DOCUMENT → INSTITUTION → RESPONSE → CONSEQUENCE → SUBSEQUENT EVENT.

The report does not assume that repetition establishes conspiracy.

It does establish a legitimate research question:

Whether apparently separate administrative events contain documentary connections, recurring decision patterns, repeated actors, referrals, terminology, procedural dependencies or other objective relationships capable of supporting a broader explanation.

=====

===

PART II — EVIDENTIARY METHOD

5. EVIDENCE CLASSIFICATION

Every significant proposition should be classified according to the following system.

A — DOCUMENTED FACT

A proposition directly established by a reliable primary document, official record, court or tribunal order, published institutional record or other authoritative source.

B — CORROBORATED CLAIM

A proposition supported by more than one materially independent source, although not necessarily the subject of a formal finding.

C — DOCUMENTED ALLEGATION

A proposition recorded in a complaint, witness statement, correspondence, submission, affidavit, personal account or other record but not independently established.

D — INFERENCE

A conclusion drawn from a collection of documentary circumstances rather than directly stated by a competent authority.

E — INTERPRETATION

A legal, analytical, philosophical, historical or theological interpretation.

F — UNRESOLVED

A matter for which the available evidence is incomplete, contradictory, unavailable or insufficient to reach a stronger classification.

6. THE CORE FORENSIC TEST

For each material allegation, the following sequence should be applied:

CLAIM

- IDENTIFY THE PRECISE PROPOSITION
- IDENTIFY THE SOURCE
- IDENTIFY THE DATE
- IDENTIFY THE ACTOR OR INSTITUTION
- LOCATE THE ORIGINAL DOCUMENT
- VERIFY THE DOCUMENT'S PROVENANCE
- IDENTIFY WHAT THE DOCUMENT ACTUALLY SAYS
- IDENTIFY WHAT IT DOES NOT SAY
- LOCATE INDEPENDENT CORROBORATION
- IDENTIFY CONTRADICTORY EVIDENCE
- IDENTIFY THE OFFICIAL RESPONSE
- DETERMINE WHETHER A COMPETENT BODY MADE A FINDING
- CLASSIFY THE PROPOSITION
- IDENTIFY CONSEQUENCES
- PRESERVE THE SOURCE.

7. THE NEGATIVE-EVIDENCE RULE

Absence of a document is not automatically evidence that an event did not occur.

Likewise, the existence of a document is not automatically proof that every statement contained within it is true.

A complaint establishes that a complaint was made.

It does not necessarily establish the truth of the complaint.

An agency response establishes that the agency responded.

It does not necessarily establish that the agency's explanation was correct.

A tribunal filing establishes that a proposition was placed before a tribunal.

It does not establish that the proposition was accepted.

A judicial judgment establishes the findings made by the court.

It does not establish propositions that the court expressly declined to determine.

This distinction is applied throughout this report.

=====

===

PART III — ARCHIVE AND PUBLIC-PROVENANCE RECORD

8. PUBLIC REPOSITORY

The principal public repository reviewed for this report is:

<https://github.com/wezzo72/Barrandodger>

The repository is public and presently exposes a substantial documentary structure. Its public directory includes evidence, emails, docs, sources, archive-parts, data, and related collections. ([GitHub](#))

The repository also contains a ten-report text series:

- REPORT 01 — MASTER EVIDENCE RECORD RECREATED
- REPORT 02 — THE 35-YEAR CHRONOLOGY
- REPORT 03 — THE ARCHITECTURE OF ADMINISTRATIVE ERASURE
- REPORT 04 — INSTITUTIONAL RESPONSE MAP
- REPORT 05 — CONTRADICTIONS, DISCREPANCIES AND UNANSWERED QUESTIONS
- REPORT 06 — THE WHISTLEBLOWER RECORD
- REPORT 07 — HUMAN RIGHTS AND REMEDY
- REPORT 08 — FORENSIC FINANCIAL RECORD
- REPORT 09 — SERIOUS ALLEGATIONS / CASE FILES
- REPORT 10 — THE REPOSITORY OF RECORD RECREATED

These files are publicly visible in the repository. ([GitHub](#))

9. PUBLIC REPOSITORY PRESERVATION STATEMENT

The repository expressly states that its website presentation is not intended to replace or rewrite the original evidence stores.

It identifies:

Primary site:

<https://drbarrandodger.github.io/barran-dodger-archive/>

Primary repository:

<https://github.com/drbarrandodger/barran-dodger-archive>

Wezzo mirror:

<https://wezzo72.github.io/Backup/>

Wezzo mirror repository:

<https://github.com/wezzo72/Backup>

It also identifies a collection of forty-eight government/agency PDFs downloaded from Google Drive on 20 September 2026 and states that these are the party’s copies rather than court findings. ([GitHub](#))

This qualification is important.

A privately held copy of an official document can be authentic without constituting a judicial finding concerning the truth of every proposition contained within it.

10. ARCHIVE SCALE

The archive’s own working inventory reports approximately 2,077 files spanning approximately thirty-five years, January 1990 through June 2025.

That figure is an archive inventory claim and should be treated as such unless independently reproduced from the complete underlying file catalogue.

The public repository currently exposes a different, narrower set of specifically indexed materials and therefore should not automatically be treated as identical to the entire historical archive.

This distinction is important for future investigators:

TOTAL ARCHIVE COUNT ≠ CURRENT PUBLIC REPOSITORY COUNT ≠ GOVERNMENT-DOCUMENT COUNT ≠ UNIQUE PRIMARY-SOURCE COUNT.

Counts must always identify:

- repository;
- date of count;
- inclusion criteria;
- file types;
- duplicates;
- attachments;
- derived reports;
- personal statements;
- official records;
- and whether mirrors were deduplicated.

=====

===

PART IV — DOCUMENTARY DOMAINS

11. GOVERNMENT AND ADMINISTRATIVE RECORDS

The archive identifies material concerning multiple administrative systems, including:

- Australian Securities and Investments Commission;
- National Disability Insurance Agency;

- National Disability Insurance Scheme;
- Administrative Appeals Tribunal / Administrative Review Tribunal;
- Victorian Government;
- Victorian administrative and legal bodies;
- WorkCover;
- Comcare;
- Australian Human Rights Commission;
- National Anti-Corruption Commission;
- IBAC;
- Office of the Australian Information Commissioner;
- Commonwealth Ombudsman;
- ministerial correspondence;
- state and federal departments;
- medical and psychiatric institutions;
- police and law-enforcement interactions;
- and other administrative bodies.

The existence of correspondence or records involving an institution demonstrates an interaction with that institution.

It does not, by itself, demonstrate institutional wrongdoing.

12. ASIC MATERIAL

The archive places substantial emphasis on corporate and registration records and describes hundreds of records concerning business registrations, ABNs, ACNs, identity-related issues and disputed corporate activity.

The archive's own interpretation characterises some of this material as fraudulent or identity-related.

Those characterisations must remain classified as allegations unless the underlying ASIC record or competent finding establishes the proposition.

The appropriate forensic question is therefore:

What exact registration occurred?

When did it occur?

Who lodged it?

What identity or authority was used?

What documentation accompanied it?

What did ASIC record?

What did ASIC subsequently do?

Was a correction, cancellation, investigation or finding made?

What independent evidence links the event to a particular person?

What remains unexplained?

13. NDIS / NDIA MATERIAL

The archive contains substantial material concerning the NDIS and NDIA.

This includes support plans, decisions, correspondence, complaints, administrative communications and material described by the archive as relating to a "Sacrifice" statement or protocol.

A particularly important alleged statement identified by the archive is:

"You will be sacrificed."

The evidentiary status of that statement depends upon the original document, its sender, date, recipients, surrounding correspondence and authentication.

The correct forensic presentation is therefore:

DOCUMENTED ALLEGATION / QUOTED STATEMENT — pending direct verification against the original source.

The existence of a disputed statement must not be converted into a finding that an institutional "sacrifice protocol" existed unless independent evidence establishes that proposition.

14. TRIBUNAL AND LEGAL MATERIAL

The archive contains material concerning tribunal and legal proceedings, including applications, orders, submissions, witness statements and procedural records.

A tribunal application demonstrates that a matter was brought before the tribunal.

A tribunal order demonstrates what the tribunal ordered.

A tribunal judgment or reasons demonstrate findings made by the tribunal.

A submission demonstrates what a party argued.

These categories must not be conflated.

15. HUMAN RIGHTS AND INTEGRITY MATERIAL

The archive identifies correspondence and complaint material involving human-rights and integrity institutions.

The forensic significance of such records is that they can establish:

- that a complaint was made;
- the date it was lodged;
- the issues raised;
- the institution's response;
- whether jurisdiction was accepted;
- whether an investigation occurred;
- whether the matter was closed;
- and whether a substantive finding was made.

A complaint to an integrity institution does not itself establish the underlying misconduct.

An investigation finding, where one exists, carries a different evidentiary status.

16. COMCARE / WORKERS' COMPENSATION MATERIAL

The archive includes workers' compensation and Comcare material.

These records may be relevant to:

- injury;
- employment;
- administrative decision-making;
- medical evidence;
- causation;
- liability;
- compensation;
- review processes;

- and economic consequences.

Again, a medical or administrative determination must be reported according to the precise issue it determined rather than expanded into a broader conclusion that the decision-maker did not make.

=====

===

PART V — IDENTIFIABLE REFERENCE NUMBERS

17. REFERENCE REGISTER

The archive's working reports identify numerous institutional reference numbers, including:

IBAC:

2020712

IBAC:

20233846

IBAC:

20231101

OAIC:

CP2102752

OAIC:

43704714

Comcare:

1326583

A related Comcare filename/reference appearing in the archive material:

13265831

Administrative Appeals Tribunal:

2021/7478

Commonwealth Ombudsman:

2021103546

Commonwealth Ombudsman:

2021705589

FOI:

FOI-2022-045

FOI:

FOI-2022-045IC

FOI:

FOI-22-01-IR

Ministerial/reference correspondence:

MR2200677

NDIS FOI:

2023-0072

Additional ministerial/correspondence identifiers recorded in the archive include:

MC20-004770

MC22-000112

MC23-026854-1

These identifiers should be treated as archival reference leads until each is matched against the original issuing institution’s record.

The proper next evidentiary step for each is:

REFERENCE NUMBER

→ ISSUING BODY

→ ORIGINAL DOCUMENT

→ DATE

→ SUBJECT

→ RECIPIENT

→ DECISION / RESPONSE

→ ATTACHMENTS

→ RELATED FILES

→ OFFICIAL VERIFICATION.

18. WHY REFERENCE NUMBERS MATTER

A reference number is more than a citation.

It allows an investigator to ask the institution:

“Please identify the record associated with this reference number.”

That creates a reproducible chain between the public archive and the original administrative system.

The archive should therefore avoid replacing official identifiers with descriptive titles. Both should be retained.

=====

===

PART VI — THE 35-YEAR CHRONOLOGICAL FRAME

19. 1990–2025

The archive presents itself as a longitudinal record extending approximately thirty-five years. The significance of a long period is methodological rather than automatically incriminating.

A long chronology allows researchers to distinguish:

- isolated events;
- recurring events;
- changes of institution;
- changes of jurisdiction;
- changes of terminology;
- changes in administrative treatment;
- periods of successful remedy;
- periods without remedy;

- and possible causal connections.

20. CHRONOLOGY MUST NOT BECOME CAUSATION

A later event occurring after an earlier event does not prove that the earlier event caused it.

For example:

A complaint followed by an adverse administrative decision is a temporal relationship.

It is not automatically proof that the complaint caused the decision.

A move between jurisdictions followed by a change in administrative circumstances is a temporal relationship.

It is not automatically proof that the move was engineered.

A financial loss following an administrative decision is temporal evidence.

It is not automatically proof that the institution intended the financial loss.

The report therefore preserves chronology while refusing to manufacture causation.

=====

===

PART VII — THE ALLEGED ADMINISTRATIVE PATTERN

21. ARCHIVE'S ANALYTICAL CATEGORIES

The archive uses several labels to describe the cumulative pattern it perceives.

These include:

ADMINISTRATIVE NEUTRALIZATION

DOCTRINE OF CATEGORICAL EXCLUSION

COMMAND OF SILENCE

WEAPONIZATION OF TIME AND TRUTH

ECONOMIC AND PROFESSIONAL ERASURE

ADMINISTRATIVE ATTRITION

SOCIAL AND GEOGRAPHIC DISLOCATION

PATHOLOGIZATION OF TRUTH

IDENTITY DILUTION

BUREAUCRATIC SIEGE

FINANCIAL STARVATION

SACRIFICE.

These are analytical labels.

They are not presented in this report as established legal doctrines.

22. THE RETROSPECTIVE "UNSPOKEN COMMAND"

The archive seeks to identify what it describes as an "unspoken command": the practical administrative outcome produced by repeated institutional conduct even where no document explicitly states such a command.

The most defensible formulation is:

"Resolve, contain, defer, fragment, redirect, classify, proceduralise and exhaust the complainant's attempts to obtain effective recognition or remedy, while maintaining the

appearance of ordinary administrative process.”
However, this must be classified as an analytical reconstruction rather than a discovered written directive.
The distinction is crucial.
No responsible forensic report should state that an actual secret command existed unless a document, witness, admission, communication or other reliable evidence establishes its existence.
The archive can nevertheless legitimately investigate whether repeated administrative behaviour produced an effect resembling such a command.

23. THE FORENSIC QUESTION
The central question is therefore not:
“Was there definitely a secret command?”
It is:

“Does the documentary record contain sufficient independent evidence of coordinated or recurring administrative conduct that the cumulative effect cannot reasonably be understood solely as unrelated administrative events?”
That question remains open unless competent evidence resolves it.
=====

PART VIII — 2021 AND JURISDICTIONAL DISLOCATION

24. THE 2021 PERIOD
The archive identifies 2021 as a critical period involving a medical crisis, subsequent institutional interactions and a major change in the author’s circumstances and jurisdiction. The archive characterises the subsequent movement away from Victoria as “removal” or “exile.”
Those terms represent the author’s interpretation unless an authoritative record establishes that the movement was formally compelled.
The forensic questions are:

- What event occurred?
- Who made the relevant decision?
- Was the movement voluntary, compelled or circumstantial?
- What documentation existed?
- Which institutions were involved?
- What was communicated to the author?
- What alternatives existed?
- What services were available?
- What happened immediately afterwards?
- What changed administratively?
- What evidence independently corroborates the author’s account?

25. WHY THIS PERIOD IS IMPORTANT

A change of jurisdiction can disrupt:

- medical continuity;
- legal representation;
- social networks;
- access to records;
- administrative contacts;
- disability supports;
- employment;
- housing;
- financial stability;
- and continuity of complaint processes.

These consequences can be documented without assuming the cause.

=====

===

PART IX — MEDICAL AND PSYCHIATRIC RECORDS

26. MEDICAL RECORDS

The archive contains a substantial number of medical and psychiatric records.

The proper forensic use of these records is not to determine the author’s medical status through AI.

The records should instead be examined for:

- dates;
- diagnoses recorded;
- observations;
- sources of information;
- changes in diagnostic terminology;
- disputed factual statements;
- reliance on third-party reports;
- treatment decisions;
- institutional communications;
- procedural safeguards;
- and whether later records accurately reproduced earlier records.

27. PATHOLOGISATION QUESTION

The archive raises the proposition that disputed allegations or complaints may have been interpreted through psychiatric or behavioural classifications.

This is a legitimate research question.

It should not be turned into the opposite unsupported proposition that all medical characterisations were false.

The evidentiary test is:

What did the clinician personally observe?

What information came from another person?

What information came from an institution?

What was independently tested?
What was accepted without testing?
What changed over time?
What documentary evidence contradicted the recorded interpretation?

28. THE IMPORTANT PRINCIPLE
A psychiatric diagnosis does not, by itself, establish that every associated factual allegation is false.
Conversely, a person’s confidence in an allegation does not establish that the allegation is true.
The correct forensic method is to test the factual proposition independently.

=====

===

PART X — FINANCIAL AND PROFESSIONAL CONSEQUENCES

29. ECONOMIC RECORD
The archive contains material from which the author has estimated substantial cumulative financial damage.
The archive has separately referred to:
approximately \$6.5 million or more in denied claims;
and a broader estimated damage figure of approximately \$32.9 million.
These are archive-derived estimates.
They should not be presented as judicially established damages unless a competent body has determined them.

30. FORENSIC FINANCIAL TEST
Each claimed loss should be reconstructed as:
EVENT
→ ADMINISTRATIVE DECISION
→ DIRECT FINANCIAL EFFECT
→ DOCUMENTARY PROOF OF AMOUNT
→ COUNTERFACTUAL POSITION
→ CAUSATION
→ MITIGATION
→ SUBSEQUENT LOSS
→ INDEPENDENT VERIFICATION.

This prevents aggregate estimates from obscuring the distinction between documented loss and estimated consequential loss.

31. PROFESSIONAL CONSEQUENCES
The archive also describes economic and professional erasure.
The evidence should distinguish:
● actual lost employment;

- actual lost contracts;
- documented refusal;
- documented reputational statement;
- inability to work;
- consequential loss;
- projected future loss;
- and subjective perception of professional exclusion.

=====

===

PART XI — COMPARISON WITH “TARGETED INDIVIDUAL” AND “GANG-STALKING” TESTIMONY

32. NO SINGLE GLOBAL AUTHORITATIVE DEFINITION

There is no universally authoritative scientific, legal or international definition establishing “Targeted Individual” or “gang-stalking” as a recognised government program.

The terms are used by advocacy organisations, individuals, researchers and litigants in different ways.

Therefore the comparison in this report is phenomenological and documentary, not a declaration that the archive belongs to a verified global program.

33. TARGETED JUSTICE

Targeted Justice describes itself as a human-rights organisation advocating for people who identify as Targeted Individuals. Its website states that it believes government weaponisation, gangstalking and related conduct occur. ([Targeted Justice, Inc.](#))

Its “What Is a Targeted Individual?” page defines a Targeted Individual in terms of alleged government weaponisation and a secret targeting program. ([Targeted Justice, Inc.](#))

Its gang-stalking page goes further and alleges involvement by U.S. government agencies, fusion centres and intelligence structures. Those are claims made by Targeted Justice and are not independently established merely by the publication of the page. ([Targeted Justice, Inc.](#))

Its legal-information page states that it is not a law firm and does not provide legal advice. It also lists hundreds of cases it describes as involving Targeted Individuals, gangstalking and directed-energy weapons. The existence of those listed cases does not mean that the allegations in every case were judicially proved. ([Targeted Justice, Inc.](#))

Its flyers page provides additional primary-source advocacy material concerning Targeted Individuals, alleged targeting programs and related subjects. ([Targeted Justice, Inc.](#))

34. TARGETED JUSTICE PRIMARY SOURCES

Significant publicly accessible materials include:

Targeted Justice — Gangstalking:

<https://targetedjustice.com/gangstalking>

Targeted Justice — What Is a Targeted Individual:

<https://targetedjustice.com/whatisatargetedindividual>

Targeted Justice — Legal Information:

<https://targetedjustice.com/legal-information>

Targeted Justice — Flyers:

<https://targetedjustice.com/flyers>

Targeted Justice — Advice About Gangstalking:

<https://www.targetedjustice.com/uploads/1/1/6/3/116323993/advice-about-gangstalking-targeted-individuals.pdf>

Targeted Justice — The Governors of Gangstalking:

<https://www.targetedjustice.com/uploads/1/1/6/3/116323993/the-governors-of-gangstalking.pdf>

These sources are important for documenting what the advocacy movement itself claims. They should not be represented as neutral scientific or governmental determinations.

35. ACADEMIC STUDY — SHERIDAN AND JAMES, 2015

Lorraine Sheridan and David James published:

"Complaints of group-stalking ('gang-stalking'): an exploratory study of their nature and impact on complainants."

Journal of Forensic Psychiatry & Psychology, Volume 26, Issue 5, pages 601–623.

DOI:

10.1080/14789949.2015.1054857

Public source:

<https://www.tandfonline.com/doi/full/10.1080/14789949.2015.1054857>

The study reports that 1,040 respondents met the researchers' definition of stalking and that 128, or 12.3%, reported group-stalking. The authors reported their interpretation that the group-stalking reports in their sample were likely delusional in basis and also reported substantial psychological and practical effects among the complainants. ([Taylor & Francis Online](#))

This study therefore establishes that:

- people report group-stalking;
- the phenomenon has been subject to academic investigation;
- recurring impacts have been documented;
- researchers have reached particular interpretations about the reports.

It does not establish that a coordinated government gang-stalking program exists.

36. ACADEMIC STUDY — SHERIDAN, JAMES AND ROTH, 2020

The 2020 study:

"The Phenomenology of Group Stalking ('Gang-Stalking'): A Content Analysis of Subjective Experiences"

analysed fifty online descriptions of gang-stalking and identified recurring categories of subjective experience. ([PubMed Central \(PMC\)](#))

The study is useful to the Barran Dodger Archive because it permits a structured comparison between reported experiences.

The proper question is not:

"Does another person report something similar, therefore the same perpetrators exist?"

The proper question is:
“Does the archive contain experiences falling within categories independently documented in the literature concerning people who describe themselves as gang-stalking or Targeted Individuals?”
Similarity may constitute comparative corroboration of the existence of a recurring type of testimony.
It does not constitute causal corroboration of a common program.

37. SARTESCHI
The academic literature also includes work examining Targeted Individuals and gang-stalking narratives in relation to extreme violence and mass-murder cases.
Such literature is useful for studying the phenomenon of the belief, testimony, community and associated narratives.
It should not be used to infer that every person using the terminology is violent, delusional or factually incorrect.

=====

===

PART XII — JUDICIAL RECORD CONCERNING TARGETED JUSTICE

38. TARGETED JUSTICE v GARLAND
An important independent judicial source is:
Targeted Justice, Inc. et al. v. Merrick B. Garland et al.
United States Court of Appeals for the Fifth Circuit
No. 23-20342
Document 74-1
Filed March 8, 2024.
Official court PDF:
<https://www.ca5.uscourts.gov/opinions/unpub/23/23-20342.0.pdf>
The official appellate record identifies Targeted Justice and individual plaintiffs as appellants and Garland, the FBI, DHS and other officials and entities as appellees. ([Court of Appeals for the Fifth Circuit](#))

39. EVIDENTIARY SIGNIFICANCE OF THE CASE
The case establishes that allegations concerning government targeting and related conduct were brought into federal judicial proceedings.
It does not establish the truth of every allegation.
The court’s treatment of those claims must be reported as a judicial record, not as independent confirmation of the underlying targeting allegations.
This distinction is particularly important when comparing the Barran Dodger Archive with Targeted Individual literature.

40. THE CORRECT COMPARISON
The comparison should therefore be:

BARRAN DODGER ARCHIVE:
Longitudinal personal and administrative documentary record.

TARGETED JUSTICE:
Advocacy framework and community documentation.

ACADEMIC LITERATURE:
Study of reported experiences and phenomenology.

COURT RECORD:
Evidence of actual litigation and judicial treatment of allegations.

GOVERNMENT RECORDS:
Primary evidence concerning specific administrative events.

These sources answer different questions.

=====

===

PART XIII — CORROBORATION MATRIX

41. MATRIX

ISSUE: LONG-TERM ADMINISTRATIVE INTERACTION

Archive evidence:
Large chronological correspondence and records collection.

Independent significance:
Public repository demonstrates existence of an extensive documentary project.

Status:
DOCUMENTED AS TO ARCHIVE EXISTENCE.

Underlying allegations require individual assessment.

ISSUE: REPEATED REPORTING OF HARM

Archive evidence:
Multiple complaints, statements and correspondence.

Independent significance:
The existence of repeated complaints can be verified from documents; the truth of each complaint must be independently tested.

Status:
DOCUMENTED ALLEGATION unless independently established.

ISSUE: GROUP-STALKING / GANG-STALKING TERMINOLOGY

Archive evidence:
Comparative use of terminology and reported experiences.

Independent literature:
Sheridan & James 2015; Sheridan, James & Roth 2020.

Status:
CORROBORATED AS A PHENOMENON OF REPORTED TESTIMONY.

Status of a common perpetrator:

NOT ESTABLISHED by similarity alone.

ISSUE: TARGETED-INDIVIDUAL ADVOCACY

Independent source:

Targeted Justice publications.

Status:

DOCUMENTED EXISTENCE OF AN ADVOCACY MOVEMENT AND ITS CLAIMS.

Status of advocacy claims:

NOT INDEPENDENTLY ESTABLISHED merely by publication.

ISSUE: TARGETED JUSTICE LITIGATION

Independent source:

Fifth Circuit case 23-20342.

Status:

DOCUMENTED JUDICIAL PROCEEDING.

Status of underlying allegations:

Must be determined from judicial findings, not assumed from filing.

ISSUE: ADMINISTRATIVE HARM

Archive:

Complaints, decisions, correspondence and consequences.

Status:

Requires event-by-event assessment.

ISSUE: SECRET COORDINATING DIRECTIVE

Archive:

Retrospective pattern analysis.

Status:

INFERENCE / UNRESOLVED unless a primary source establishes it.

ISSUE: FINANCIAL LOSS

Archive:

Claimed financial estimates.

Status:

DOCUMENTED only to the extent supported by invoices, decisions, bank records, compensation determinations and other primary financial evidence.

Aggregate \$32.9 million estimate:

ARCHIVE ESTIMATE, not an established judgment.

Aggregate \$6.5 million-plus denied claims figure:

ARCHIVE FIGURE, not an established judgment unless independently determined.

=====

===

PART XIV — WHAT THE PUBLIC RECORD ESTABLISHES

42. ESTABLISHED PUBLIC-RECORD PROPOSITIONS

The following propositions can presently be stated with materially greater confidence:

1. A public Barran Dodger GitHub repository exists.
2. The repository contains a substantial documentary corpus.
3. The repository contains dedicated evidence, email, source, document and report structures.
4. The repository contains a ten-part forensic report series.
5. The repository expressly states that underlying evidence should remain preserved.
6. The repository contains a collection described as official-drive government/agency PDFs.
7. The repository contains documents concerning government agencies, legal proceedings, personal testimony, administrative interactions and other matters.
8. Targeted Justice publicly exists and publishes advocacy material concerning Targeted Individuals and gang-stalking.
9. Academic researchers have studied self-reported group-stalking/gang-stalking experiences.
10. Targeted Justice has been involved in actual federal litigation concerning allegations of government targeting.
11. The Fifth Circuit published an official decision in Targeted Justice v Garland, No. 23-20342, on March 8, 2024.
12. The public record therefore permits independent examination of both the archive and the broader documentary, academic and judicial context.

=====

===

PART XV — WHAT IS NOT ESTABLISHED BY THIS REPORT

43. UNRESOLVED PROPOSITIONS

This report does not establish, merely from the existence of the archive:

1. That every alleged act of persecution occurred.
2. That every adverse administrative decision was coordinated.
3. That multiple agencies operated under a common secret instruction.
4. That a "Sacrifice" protocol existed as an institutional program.
5. That every person identified in the archive participated in wrongdoing.
6. That corporate registrations described as fraudulent were necessarily committed by a particular person.
7. That every medical or psychiatric interpretation was false.
8. That every financial loss was caused by government conduct.
9. That a global gang-stalking program exists.
10. That the Targeted Individual phenomenon proves a government targeting program.
11. That similarities between testimonies establish a common perpetrator.
12. That an absence of documentary response proves intentional concealment.
13. That every institutional failure was deliberate.
14. That every coincidence in the chronology is causal.
15. That any particular person or agency is criminally liable unless a competent authority establishes liability.

These remain matters for evidence.

=====

===

PART XVI — THE “UNSPOKEN COMMAND” AS A FORENSIC HYPOTHESIS

44. RETROSPECTIVE FORMULATION

The archive repeatedly attempts to derive a common administrative effect from apparently separate events.

The most defensible formulation is not that an identified secret order has been discovered. It is:

“Where repeated administrative interactions produce a consistent practical outcome of fragmentation, delay, referral, exclusion, procedural exhaustion, disputed characterisation and failure to reach substantive resolution, the cumulative record may be analysed as an administrative pattern even where no single document expressly commands that outcome.” That proposition is analytically legitimate.

It remains distinct from:

“There was a secret government order.”

The latter requires evidence.

45. THE HYPOTHESISED ADMINISTRATIVE MECHANISM

The archive’s analysis can be reduced to the following sequence:

- 1. Allegation or complaint arises.
- 2. Complaint enters an institutional process.
- 3. Institution processes the matter within a limited jurisdiction.
- 4. Matter is redirected, closed, referred or compartmentalised.
- 5. New institution receives a narrower version of the history.
- 6. Earlier context becomes fragmented.
- 7. New institution relies upon existing records or characterisations.
- 8. The complainant attempts to reconstruct the larger history.
- 9. Additional correspondence is generated.
- 10. Additional correspondence becomes further evidence.
- 11. The process repeats.

The potential cumulative effect is:

MORE RECORDS → MORE FRAGMENTATION → MORE PROCEDURAL BURDEN → LESS WHOLE-OF-CASE REVIEW.

This is a testable administrative hypothesis.

It is not proof of intentional coordination.

=====

===

PART XVII — HUMAN-RIGHTS SIGNIFICANCE

46. WHY THE ARCHIVE MAY MATTER BEYOND THE INDIVIDUAL CASE

Even if particular allegations remain disputed, the methodology raises broader questions relevant to administrative justice:

- How should long-term complainants preserve evidence?
- How should agencies handle repeated complaints involving multiple jurisdictions?
- How should conflicting institutional records be reconciled?
- How should vulnerable complainants challenge inaccurate administrative characterisations?
- How can an individual demonstrate cumulative harm where no single institution possesses the whole record?
- How should complaint bodies distinguish vexatious repetition from legitimate unresolved systemic grievance?
- How should records be preserved when institutions change?
- How can independent investigators reconstruct fragmented administrative histories?

These questions have relevance beyond any individual complainant.

47. INTERNATIONAL VALUE

The archive may therefore be useful as a case-study methodology for:

- whistleblower documentation;
- administrative-law research;
- institutional accountability;
- human-rights documentation;
- digital evidence preservation;
- documentary chronology;
- complaint-system analysis;
- public-interest journalism;
- and comparative research concerning allegations of coordinated harassment.

The international significance should arise from the quality and reproducibility of the evidence rather than from the magnitude of the allegation.

=====

===

PART XVIII — A MODEL FOR OTHER COMPLAINANTS

48. HOW ANOTHER PERSON CAN USE THE ARCHIVE METHOD

A person documenting a serious institutional grievance should create six layers.

LAYER 1 — ORIGINAL RECORD

Keep the original email, letter, PDF, decision, recording, photograph or other primary evidence.

LAYER 2 — METADATA

Record:

- filename;
- creation date;
- received date;
- sender;

- recipient;
- reference number;
- institution;
- subject;
- source location.

LAYER 3 — CHRONOLOGY

Create a dated event sequence.

LAYER 4 — CORROBORATION

Identify independent records supporting or contradicting the proposition.

LAYER 5 — RESPONSE

Record what the responsible institution said or did.

LAYER 6 — STATUS

Classify:

DOCUMENTED

CORROBORATED

ALLEGED

INFERRED

INTERPRETIVE

UNRESOLVED.

49. DO NOT DESTROY THE CONTRADICTORY MATERIAL

A legally credible archive must preserve evidence that does not support the author's interpretation.

This includes:

- adverse decisions;
- contradictory correspondence;
- negative findings;
- unsuccessful applications;
- medical opinions with which the author disagrees;
- tribunal decisions;
- police responses;
- institutional explanations;
- and evidence that appears inconsistent with the author's hypothesis.

Preserving contrary evidence increases rather than decreases the credibility of the archive.

PART XX — FORENSIC CONCLUSION

54. CONCLUSION

The Barran Dodger Archive should be understood first as a documentary preservation project and second as an analytical argument.

Its greatest evidentiary value does not depend upon accepting every interpretation contained within it.

Its value lies in making the underlying record available for inspection.

The archive provides a structure through which a reviewer can move backwards:

FROM CLAIM
TO DOCUMENT
FROM DOCUMENT
TO INSTITUTION
FROM INSTITUTION
TO DATE
FROM DATE
TO PROCEDURE
FROM PROCEDURE
TO RESPONSE
FROM RESPONSE
TO CONSEQUENCE
FROM CONSEQUENCE
TO CORROBORATION OR CONTRADICTION.

That is the correct direction of forensic inquiry.

Not:

ALLEGATION → CONCLUSION.

But:

ALLEGATION → RECORD → VERIFICATION → CORROBORATION → CONTRADICTION → FINDING.

55. THE WITNESS REMAINS

The central proposition of the archive can therefore be expressed without converting contested allegations into established facts:

A person may be denied recognition by an institution without the underlying historical record disappearing.

A complaint may be rejected without the complaint ceasing to exist.

A record may be disputed without the record ceasing to be evidence.

A person's interpretation may be contested without the underlying documents becoming irrelevant.

An administrative decision may stand without necessarily answering every historical question.

A tribunal proceeding may end without resolving every event contained in a thirty-five-year chronology.

And an individual may preserve the documentary record so that future reviewers can examine what happened without depending solely upon the memory of the person who experienced it.

56. THE PRINCIPLE OF PRESERVATION

The archive therefore adopts the following principle:

PRESERVE FIRST.

CLASSIFY SECOND.

CORROBORATE THIRD.

INTERPRET FOURTH.

CONCLUDE LAST.

The purpose is not to prevent criticism.

It is to make criticism possible.

The purpose is not to predetermine the outcome of an investigation.

It is to make an investigation possible.

The purpose is not to demand that every allegation be accepted.

It is to ensure that allegations can be tested against the underlying record.

57. FINAL FORENSIC POSITION

On the material presently identifiable through the public archive and independently available comparative sources, the following propositions can coexist without contradiction:

The Barran Dodger Archive contains a substantial and publicly accessible documentary corpus.

The archive contains serious allegations concerning interactions with government and other institutions.

The archive contains documentary material capable of being independently examined.

The archive’s authorship and interpretation remain distinct from official findings.

The Targeted Individual/gang-stalking phenomenon is documented as a subject of personal testimony, advocacy and academic research.

Targeted Justice publicly advances substantially stronger claims concerning government targeting than the academic literature establishes.

Actual litigation concerning Targeted Individual allegations has occurred.

That litigation does not itself prove the allegations.

The academic literature demonstrates that recurring group-stalking experiences have been reported and studied.

That literature does not independently establish a global government program.

The similarities between the Barran Dodger Archive and other testimony therefore justify comparative examination.

They do not, by themselves, establish common perpetrators.

The documentary archive may contain evidence capable of establishing individual administrative failures, procedural irregularities, factual inconsistencies, institutional responses or other objectively verifiable matters.

Those propositions must be tested document by document.

The existence of an overarching secret directive remains an evidentiary hypothesis unless a competent source establishes it.

The most legally durable version of the archive is consequently not one that asks the reader to accept everything.

It is one that allows the reader to verify everything that can be verified.

=====

===

PART XXI — DECLARATION OF EVIDENTIARY STATUS

58. DECLARATION

This report is an analytical and documentary synthesis.

It is not a judicial determination.

It is not legal advice.

It is not a medical diagnosis.

It is not an assertion that every allegation contained in the underlying archive has been proven.

Where the report describes an allegation, the allegation remains an allegation unless an identified competent source establishes it.

Where the report describes an institutional record, the existence and contents of that record should be distinguished from the truth of every proposition contained within it.

Where the report describes an academic study, the study's methodology and conclusions belong to its authors.

Where the report describes an advocacy organisation, its statements are attributed to that organisation.

Where the report describes a court case, the judicial record controls the description of what the court actually decided.

Where evidence remains incomplete, the appropriate classification is UNRESOLVED.

59. PROVENANCE REQUIREMENT

For formal legal, investigative or human-rights submission, each material proposition should ultimately be accompanied by:

DOCUMENT TITLE

ISSUING BODY

DATE

REFERENCE NUMBER

PAGE NUMBER

ORIGINAL FILE

AUTHENTICATION / PROVENANCE

PUBLIC SOURCE

ARCHIVE LOCATION

HASH

RELATED DOCUMENTS

CONTRADICTION DOCUMENTS

EVIDENTIARY CLASSIFICATION.

60. DOCUMENT CONTROL

TITLE:

THE WITNESS REMAINS — MASTER FORENSIC, DOCUMENTARY AND COMPARATIVE EVIDENCE REPORT

AUTHOR:

Barran Dodger

VERSION:

Public Archive Consolidated Edition

ORIGINAL CREATION DATE:

To be recorded in the archive's document-control record.

LAST REVISION:

27 September 2026

PAGE COUNT:

To be recorded after final PDF rendering.

SHA-256:

To be calculated from the final immutable PDF.

SOURCE REPOSITORY:

<https://github.com/wezzo72/Barrandodger>

PRIMARY PUBLIC ARCHIVE:

<https://barrandodger.com/>

61. FINAL PRESERVATION STATEMENT

The underlying evidence should remain unchanged.

Future analytical reports should be created as new versions rather than overwriting the underlying primary documents.

Corrections should be recorded transparently.

Contradictory evidence should remain accessible.

Deleted or superseded interpretations should be retained where possible as version history rather than silently erased.

Every future reviewer should be able to distinguish:

WHAT THE ORIGINAL RECORD SAID

WHAT THE ARCHIVE AUTHOR SAID IT MEANT

WHAT AN INDEPENDENT SOURCE SAID

WHAT A COURT OR TRIBUNAL FOUND

WHAT REMAINS DISPUTED

AND WHAT REMAINS UNKNOWN.

That distinction is the foundation of a credible public evidentiary archive.

END OF MASTER REPORT
